

NISHITA POTHANA

FULL-STACK / PYTHON DEVELOPER

Baton Rouge, LA

+91 8374038227

nishitapothana@mail.com

[linkedin.com/](https://www.linkedin.com/in/nishita2309/)

EXPERTISE

Languages

- Python
- JavaScript
- C++
- HTML/CSS

Frameworks & Tools

- Django
- React.js
- FastAPI
- Bootstrap
- Tailwind CSS

Databases & APIs

- SQL
- REST APIs

Tools

- Git
- GitHub
- Vercel
- Render

EDUCATION

BACHELOR'S DEGREE

Malla Reddy University
2024 – 2028

Professional Profile

Computer Science student specializing in Blockchain Technology with hands-on experience in full-stack web development using Django, React.js, and REST APIs. Built and deployed responsive web applications through academic projects and hackathons. Passionate about backend development, scalable systems, and modern web technologies.

PROJECT SECTION

Asteroid mining using ml and blockchain

Tech stack: fastapi, python, scikit-learn, skyfield, sqlite3, react 19, tailwind css, framer motion, recharts, blockchain, nasa neows api

- Developed a comprehensive full-stack application that predicts asteroid mining profitability using machine learning and blockchain technology
- Built backend apis using fastapi and integrated a random forest ml model using scikit-learn for profitability prediction
- Implemented orbit simulations using skyfield and integrated nasa neows api for real asteroid data
- Designed a responsive frontend using react 19, tailwind css, shadcn/ui, and framer motion
- Visualized asteroid analytics and profitability insights using recharts
- Created a custom python-based blockchain system to securely record mining operations and transactions
- Deployed the frontend on vercel with scalable api integration

Github: <https://github.com/nishita2309/asteroid-mining-platform>

live demo: <https://asteroid-mining-platform.vercel.app/>

Earth stress analyzer

Tech stack: typescript, next.js

- Built a web application for analyzing disaster impact using satellite imagery spectral indices
- Processed sentinel-2-style multispectral data to identify flood and wildfire affected regions
- Designed interactive visualizations and damage analysis workflows for indian state regions
- Developed frontend interfaces using next.js and typescript for responsive performance
- Implemented disaster mapping and affected area computation features

Github: <https://github.com/nishita2309/earth-stress-analyzer>

live demo: <https://github.com/nishita2309/earth-stress-analyzer>

Blockchain-secured earth observation data platform

Tech stack: react, vite, node.js, express, typescript, drizzle orm, tailwind css

- Developed a decentralized platform for secure earth observation (eo) data storage and transactions
- Built frontend interfaces using react and tailwind css for geospatial data interaction
- Implemented backend services using node.js and express with typescript
- Used blockchain concepts to ensure transparent and secure eo data management
- Integrated drizzle orm for structured database interaction and scalable backend workflows

Github: https://github.com/nishita2309/blockchain_secured_earth_observation_data_platform

live demo: https://github.com/nishita2309/blockchain_secured_earth_observation_data_platform

Restaurant ingredient supply store

Tech stack: django 4.2, python 3, sqlite3, html, css, javascript, bootstrap

- Built a full-stack django e-commerce application for restaurant ingredient management and ordering
- Implemented authentication, shopping cart, stock tracking, and user order history systems
- Designed responsive product pages and reusable templates using bootstrap and django templating
- Developed backend logic for product management, routing, forms, and user account handling
- Integrated sqlite database for development and local media/static file management

Github: <https://github.com/nishita2309/restaurant-ingredient-supply-store>

live demo: <https://github.com/nishita2309/restaurant-ingredient-supply-store>

Checkpoint app

Tech stack: html, css, vanilla javascript, supabase authentication, pwa

- Developed a modern savings tracker web application for monitoring financial goals and savings progress
- Implemented authentication using supabase for secure user access and session handling
- Built responsive ui components with clean dashboard layouts and progress tracking visuals
- Added progressive web app (pwa) support for installable and mobile-friendly usage
- Designed an interactive user experience with real-time progress updates and goal management

Github: https://github.com/nishita2309/checkpoint_app/tree/main

live demo: <https://checkpoint-tracker.netlify.app/>
